### LD in a random French caucasian population

- 54 sized « random » BACs covering 8100 kb
- 213 SNP; 2 to 6 / BAC, mean allele frequency = 0.3
- Order and distance unknown
- For 1 BAC:

130 kb

- \*  $\overline{m}$  intermarker distance : 130/3 = 43 kb
- \*  $\overline{m}$  LD strength estimate : m(a,b,c) = 0.51
- For 54 BACs:
- \*  $\overline{m}$  intermarker distance = 38 kb
- \*  $\overline{m}$  LD strength estimate =  $0.63 \pm 0.05$ (324 pairs)
- For 19 unlinked SNPs: m LD strength estimate =  $0.12 \pm 0.007$ (171 pairs)
